

# 2005 Apple Keyboard Teardown

In this teardown, we will take apart an Apple keyboard to see what is inside.

Written By: Sean Clarke

## Step 1 — Description

- This keyboard has nice bouncy keys, a fancy case, and a standard USB cable.
- Let's take a look inside, shall we?

## Step 2 — Taking it apart

- The first things in our way are three extremely small screws. This will require an allen wrench, but if there are none that small, we can use a flathead screwdriver instead.
- Once you have removed these, you can pull the casing from the keyboard.

## Step 3

- Inside the casing, there are some things we can do.
- Four screws hold in the circuitry for the board. Once removed the board almost comes right out.
- Two screws hold in the small panel on the back, but it doesn't come off yet.

## Step 4

- Once oneself takes the circuit board out, they might realize that Apple made it impossible to take the USB cable out without cutting the wires, which is unfortunate.
- After that is done,

---

To reassemble your device, follow these instructions in reverse order.
